

Animating text is a great way to attract attention and direct the eye to an advertisement. We will be using ADOBE ANIMATE (formerly FLASH) to create this project. In this project you will be animating your name to make it fly around the stage and assemble itself into order. This project will teach you how to break apart words and distribute to layers.

- Note: Change the background color to a solid color other than White.
- Save your project as a .FLA file.
