

The Recut Movie Trailer

This project involves finding a movie that interests you and cut a new trailer for a completely different genre. A genre is a category such as: Comedy, Drama, Horror, Action, etc. This project will demonstrate how the change of music and editing can change EVERYTHING! Watch the two videos below to get an idea of what you are after and then get to work. High levels of creativity, writing, and story telling are needed for this project. MAKE A FOLDER ON YOUR USB DRIVE FIRST. EVERYTHING GOES IN THAT FOLDER.

Step 1: Select a Movie that interests you.

Step 2: Download the movie or clips of the movie with the movie downloader you used from the previous video projects. This can include the movie company logo intros and any other movie elements needed.

Step 3: Create a plan for how you will manipulate the original movie into a new genre trailer (Comedy to Horror?) (Select the new genre).

Step 4: Select appropriate music that will give your new trailer the appropriate vibe. Will it be a darker vibe or lighter vibe? Music should be used throughout the 2 minutes as much as possible unless it is for an effect.

Step 5: Think about how the absence of sound or video can enhance your editing. Think about video transitions that you will use to tell your new story. Notice the titling used in the example videos. Think of how your titling will be used to tell the story.

Step 6: Will you use a voice over to guide your new trailer or will you just use audio from the movie to guide the trailer?
(Record a voice over if needed)

Step 7: KEEP IT MOVING! Don't hold shots for long periods of time.

Step 8: The complete trailer should be 2 minutes in length total and exported using the .H264 codec output in Premiere as you have used for your previous video projects.

Step 9: Have fun, keep it tasteful, and creative!!!
